Understanding the Format of the AP Psychology Exam Multiple Choice

The ap psychology exam multiple choice section is designed to test a broad range of psychological knowledge through a standardized format. Students typically face 100 multiple-choice questions that must be completed within 70 minutes. This part of the exam accounts for 50% of the total exam score, emphasizing its importance. Questions are presented with four answer options, and only one is correct. The format encourages quick reading comprehension and decision-making under time constraints. Understanding the test structure helps students allocate their time effectively and anticipate the types of questions they will encounter.

Timing and Scoring

The 70-minute time limit requires students to average approximately 42 seconds per question. Efficient time management is crucial to ensure completion without sacrificing accuracy. Each correct response contributes equally to the raw score, with no penalty for guessing. This scoring method incentivizes answering every question, even if uncertain, to maximize the chance of gaining points.

Question Distribution

The questions are distributed to cover various psychological domains proportionally, mirroring the course curriculum.
