Sample Free-Response Question

Explain the General Adaptation Syndrome and its stages in response to chronic stress.

The General Adaptation Syndrome (GAS), developed by Hans Selye, describes the body's short-term and long-term reactions to stress. It consists of three stages: alarm, resistance, and exhaustion. During the alarm stage, the body recognizes the stressor and activates the fight-or-flight response. In the resistance stage, the body attempts to cope with the stressor and maintain balance.
