This chapter lays the groundwork for understanding the demographic, social, and environmental contexts of early America. It covers topics such as migration theories, the development of complex native civilizations, and the motivations behind European exploration and colonization beginning in the late 15th century. Understanding these foundational events is critical to grasping the subsequent political, economic, and social transformations that shaped colonial America.

Pre-Columbian Societies

Before the arrival of Europeans, the American continents were inhabited by diverse Native American groups with distinct cultures, languages, and social structures. The chapter explores major societies such as the Mississippian culture known for mound-building, the Ancestral Puebloans of the Southwest, and the Iroquois Confederacy in the Northeast. These groups developed sophisticated agricultural practices, trade networks, and governance systems long before European contact.

European Exploration and Contact
