## **Assessment and Examination Structure**

Assessment in biology sl ib is designed to evaluate students' understanding of biological concepts, their analytical skills, and their ability to apply knowledge in various contexts. The evaluation consists of external examinations and internal assessments, each contributing to the final grade.

### **External Examinations**

The external assessment includes two written papers. Paper 1 consists of multiple-choice questions that test students' recall and understanding of core topics. Paper 2 contains structured and extended response questions requiring more in-depth explanations, data analysis, and application of concepts. The exams assess knowledge, comprehension, and critical thinking abilities within the scope of the SL curriculum.

### **Internal Assessment**

The internal assessment is a practical investigation carried out by students during the course. It allows students to demonstrate their skills in experimental design, data collection, analysis, and evaluation. This component encourages independent research and scientific inquiry, contributing significantly to the overall assessment.

# **Practical Work and Internal Assessment**

Practical work is a vital element of biology sl ib, providing hands-on experience that complements theoretical learning. Students engage in laboratory experiments, fieldwork, and data analysis to deepen their understanding of biological processes and develop essential scientific skills.

## **Types of Practical Activities**

Practical activities include microscopy, enzyme experiments, genetics investigations, ecological surveys, and physiological measurements. These exercises help students apply scientific methods and enhance their observational and analytical competencies.

## **Internal Assessment Requirements**

For the internal assessment, students must complete an individual investigation that involves formulating a research question, designing an experiment, collecting and analyzing data, and evaluating the process and results. The investigation is assessed based on criteria such as personal engagement, exploration, analysis, evaluation, and communication.

## **Effective Study Strategies for Biology SL IB**

Success in biology sl ib requires disciplined study habits and strategic preparation. Effective study strategies enable students to master complex concepts, retain information, and perform confidently in assessments.
