Understanding Digraphs: ch, sh, th, wh

Digraphs are pairs of letters that combine to produce a single sound, or phoneme, distinct from the sounds of the individual letters. The digraphs "ch," "sh," "th," and "wh" are among the most commonly taught in early literacy programs due to their frequent occurrence and unique sounds. Understanding these digraphs is fundamental to phonics instruction and reading fluency development.

The "ch" Digraph

The "ch" digraph typically produces the /tʃ/ sound as heard in words like "chair," "chicken," and "chop." It can also have other pronunciations in words such as "chef" or "chorus," but the primary focus in early learning is the common /tʃ/ sound. Worksheets targeting "ch" help students identify and practice this sound in various word contexts.

The "sh" Digraph

The "sh" digraph represents the /ʃ/ sound, which appears in words like "ship," "brush," and "fish." This digraph is crucial for developing proper articulation and decoding skills. Engaging learners with "sh" worksheets assists in differentiating this sound from similar phonemes.

The "th" Digraph

The "th" digraph can represent two distinct sounds: the voiced /ð/ as in "this," "that," and "there," and the voiceless /θ/ as in "think," "thumb," and "bath." Worksheets often include exercises that help students distinguish between these sounds and recognize their spellings within words.

The "wh" Digraph

The "wh" digraph produces the /w/ sound in words like "what," "when," and "where." It is sometimes pronounced as /w/ depending on dialect, but phonics instruction emphasizes the unique "wh" sound. Worksheets focusing on this digraph improve students' ability to decode and spell words beginning with "wh."
